

Defining the Problem

Your Goal

To develop a system that converts the sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into understandable sign language for the deaf and dumb, the system enhances the user friendly experience.

what's a problem statement

Communications between deaf-mute and a normal person has always been a challenging task. It is very difficult for mute people to convey their message to normal people. Since normal people are not trained on hand sign language. In emergency times conveying their message is very difficult.

Kanna is a Student
who needs to talk and share his thoughts to his peers
because he does not want to feel he is different from others
